SUMMARY

Certified Penetration Testing Specialist (HTB CWES) with hands-on experience in web application security, offensive tooling, and practical Capture The Flag (CTF) challenges. Creator of an automated, cloud-based web vulnerability scanner featuring AI-assisted remediation reporting. Motivated to bring solid technical fundamentals, vulnerability analysis skills, and an active learning mindset to a dynamic security team.

CERTIFICATIONS

Certified Web Exploitation Specialist (CWES) ↗ Jul 2025

EDUCATION

Bachelor of Science in Computer Science (BSCS) Nov 2026

WORK EXPERIENCE

Web Security Automation Expert (NetNeedle)

Jan 2026 - Oct 2026

- Designed and deployed an automated web vulnerability scanning engine using Python and FastAPI, streamlining reconnaissance and flaw detection across target web applications.
- Built custom modules to evaluate REST APIs, handle dynamic session authentication, and analyze multi-tier application workflows for security vulnerabilities.
- Leveraged local LLMs (CodeBert 7B) to automate report generation, translating raw findings into structured executive summaries and developer-friendly remediation guides.
- Integrated multiple offensive tools into a unified, asynchronous execution pipeline to standardize web application penetration testing approaches.

Systems & Infrastructure Technician (11ven Tech Yards) Islamabad, PAK (Remote)

MAY 2023 - AUG 2024

- Administered and hardened Linux production servers hosting high-availability web services, applied the principle of least privilege, restricted the attack surface through service minimization, and maintained zero downtime through proactive monitoring and operational controls.
- Developed PowerShell and Python automation tools to diagnose complex system-level failures and built forensic-style diagnostic scripts that traced root causes across Windows internals, directly translating into the scripting instincts used in offensive security engagements.

PROJECTS

NetNeedle ↗

NetNeedle is a cloud-based, easy-to-use web vulnerability scanner with AI-assisted remediation reports. NetNeedle runs scans in the background and mails an overview when it's done. This project reflects my skills and my passion for what I do. Please visit the attached URL to learn more.

SKILLS

Offensive Security: Web Application & API Security Testing, Internal & External Network Penetration Testing, Black-Box & Grey-Box Assessments, Vulnerability Assessment & Penetration Testing (VAPT), Source Code Review, Privilege Escalation

Tooling: Burp Suite Pro, Metasploit Framework, Nmap, Nessus, SQLmap, FFUF, Gobuster, Nikto, Wireshark, Kali Linux, Custom Python tooling, Nuclei, Postman

Vulnerabilities & Methodologies: OWASP Top 10, OWASP API Security Top 10, MITRE ATT&CK Framework, CWE, CVE Research & Local Exploitation, Patch Analysis

GRC & Security Compliance: ISO/IEC 27001, NIST Cybersecurity Framework (CSF), CIS Critical Security Controls, Swiss Information Security Act (ISG), FINMA Operational Risk Guidelines
